```
申请和归还主存资源问题
int x = memory; //memory为初始主存容量
void borrow (int B){
                               void return (int B){
   while (B > X){
                                 X = X + B;
      {进程进入等待主存资源队列};
                                  {修改主存分配表};
                                  X = X - B;
                                  {释放等主存资源进程};
   X = X - B;
   {修改主存分配表,进程获得主存资源};
```
